# List all fonts available in matplotlib plus samples

This page is based on a Jupyter/IPython Notebook: download the original .ipynb (</lede/data-studio/matplotlib/list-all-fonts-available-in-matplotlib-plus-samples.ipynb>)

It's pretty easy to find someone online giving you a list of all of the fonts available in `matplotlib`, but they're always really ugly boring lists. This gives you a list *plus* samples of each font. There might be issues about system fonts vs. `matplotlib` fonts, but I haven't noticed anything yet.

## An attractive list all matplotlib fonts

You'll need to run this code in your own Jupyter Notebook to get the fonts that will work on your own computer.

```
import matplotlib.font_manager
from IPython.core.display import HTML

def make_html(fontname):
    return "<p>{font}: <span style='font-family:{font}; font-size: 24px;'>{font}</p>".format(
        font=fontname)

code = "\n".join([make_html(font) for font in sorted(set([f.name for f in matplotlib.font_ma
nager.fontManager.ttflist]))])

HTML("<div style='column-count: 2;'>{</div>".format(code))
```

## Want to hear when I release new things?

My infrequent and sporadic newsletter can help with that.

### Hi, I'm Soma

I run a fake school in Brooklyn (<http://brooklynbrainery.com>) and a data journalism program (<http://ledeprogram.com>) at Columbia University's Journalism School.

I also co-host talks about food science and culture in a semi-monthly lecture series called Masters of Social Gastronomy (<http://omgmsg.com>). We have a podcast (<https://soundcloud.com/msgpodcast>) that doesn't get updated nearly often enough, too.

Sign up for my newsletter (<http://tinyletter.com/jsoma>) and I will *definitely* disappoint you.
